ELSEVIER

Journal of Materials Processing Technology 94 (1999) 267–270

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 94

Abrasive Waterjet cutting
A machinability study of polymer matrix composites using abrasive waterjet cutting technology, 30
AISI 304 stainless steel
Prediction of the formability of metastable low nickel austenitic stainless steel sheets, 201
Al matrix in-situ particle composite
Mechanical properties of hot worked Al–5CuO particle composite, 179
Aluminium composite
Microstructure and mechanical behaviour of a SiC particles reinforced Al–5Cu composite under dynamic loading, 175
Aperture
Finite-element analysis and design in the combined precision forming of bending and coining with experimental measurement, 167

Beading
Finite-element analysis and design in the combined precision forming of bending and coining with experimental measurement, 167
Bending
Finite-element analysis and design in the combined precision forming of bending and coining with experimental measurement, 167
Blade forging
Research on a new remeshing method for the 3D FEM simulation of blade forging, 231
Bulk behaviour
Improvement of stamping computations by means of the identification of the bulk behaviour of coatings: application to galvanized sheets, 23

Carbide tool
Fuzzy-logic based intelligent selection of machining parameters, 94
Coining
Finite-element analysis and design in the combined precision forming of bending and coining with experimental measurement, 167
Cold forward extrusion
Finite-element modelling of cold forward extrusion, 85
Cold welding
The stress–strain state of the contact in the simulation of cold welding processes, 3
Composite processing
A machinability study of polymer matrix composites using abrasive waterjet cutting technology, 30
Contact friction
Calculation of temperature and determination of deformation resistance in H-beam rolling
(1) Temperature variation in a stand, 123
Contact lines
Profile determination of a tube-straightening roller by envelope theory, 157
Contact
The stress–strain state of the contact in the simulation of cold welding processes, 3
Copper oxide
Mechanical properties of hot worked Al–5CuO particle composite, 179
Copper
Mechanical properties of hot worked Al–5CuO particle composite, 179
Cup–rod combined extrusion
Numerical simulation and surface crack analysis of cup–rod combined extrusion, 261
Cutting edge geometry
Effect of cutting edge geometry and workpiece hardness on surface generation in the finish hard turning of AISI 52100 steel, 216

3D FEM simulation
Research on a new remeshing method for the 3D FEM simulation of blade forging, 231
Dead Sea Scrolls
Professor Henry Wright Baker: the Dead Sea Scrolls and his centenary, 66
Deformation resistance
Calculation of temperature and determination of deformation resistance in H-beam rolling
(2) Total change of temperature and deformation resistance, 128
Dieless drawing
Study of the deformation velocity field and drawing force during the dieless drawing of tube, 73
Distortion
Research on the section distortion of hat-section profiles in rotary draw bending with stretching force, 41
Drawing force
Study of the deformation velocity field and drawing force during the dieless drawing of tube, 73
Ductile fracture criteria
Numerical simulation and surface crack analysis of cup–rod combined extrusion, 261
Dynamic loading
Microstructure and mechanical behaviour of a SiC particles reinforced Al–5Cu composite under dynamic loading, 175

Elliptical workpieces
Experimental research on a new technology – ellipse spinning, 197
Equal-cross section lateral extrusion
Finite-element analysis of the load of equal-cross-section lateral extrusion, 193

Elsevier Science S.A.
PII: S0924-0136(99)00387-8

Fatigue strength
A study on the joining strength of laser spot welding for automotive applications, 151
Ferritic stainless steel
A comparative evaluation of gas tungsten and shielded metal arc welds of a "ferritic" stainless steel, 133
Finite element analysis
Finite-element modelling of cold forward extrusion, 85
Finite element method
A study on the joining strength of laser spot welding for automotive applications, 151
Finite-element computation
Improvement of stamping computations by means of the identification of the bulk behaviour of coatings: application to galvanized sheets, 23
Finite-element method
A finite-element analysis of residual stress in stretch grinding, 13
Finite-element programs
A new concept for the description of surface friction phenomena, 189
Finite-element simulation
Finite-element analysis of the load of equal-cross-section lateral extrusion, 193
Flow localisation
Prediction of the formability of metastable low nickel austenitic stainless steel sheets, 201
Formability modelling
Prediction of the formability of metastable low nickel austenitic stainless steel sheets, 201
Forming-limit diagrams (FLDs)
Prediction of the formability of metastable low nickel austenitic stainless steel sheets, 201
Fracture
Rupture failure and mechanical strength of the electrode wire used in wire EDM, 208
Friction coefficient
Improvement of stamping computations by means of the identification of the bulk behaviour of coatings: application to galvanized sheets, 23
Friction
A new concept for the description of surface friction phenomena, 189
Fuzzy-logic principles
Fuzzy-logic based intelligent selection of machining parameters, 94

Galvanised steels
Improvement of stamping computations by means of the identification of the bulk behaviour of coatings: application to galvanized sheets, 23
Gas tungsten arc
A comparative evaluation of gas tungsten and shielded metal arc welds of a "ferritic" stainless steel, 133

H-beam rolling
Calculation of temperature and determination of deformation resistance in H-beam rolling
(1) Temperature variation in a stand, 123
Calculation of temperature and determination of deformation resistance in H-beam rolling
(2) Total change of temperature and deformation resistance, 128
H. Wright Baker
Professor Henry Wright Baker: the Dead Sea Scrolls and his centenary, 66
Hard turning
Effect of cutting edge geometry and workpiece hardness on surface generation in the finish hard turning of AISI 52100 steel, 216
Hardness
Mechanical properties of hot worked Al–5CuO particle composite, 179
Hat-section
Research on the section distortion of hat-section profiles in rotary draw bending with stretching force, 41
Heat transfer
Modelling heat transfer in hot rolling work rolls, 52
Heat-treatment
Heat-treatment of zinc-coated aluminium, 112
Helical fluted end mill
Finite-element modeling of static surface errors in the peripheral milling of thin-walled workpieces, 235
Hopkinson bar
Microstructure and mechanical behaviour of a SiC particles reinforced Al–5Cu composite under dynamic loading, 175
Hot explosive consolidation
Microstructural effects in hot-explosively-consolidated W–Ti alloys, 247
Hot rolling
Behaviour of longitudinal surface cracks in the hot rolling of steel slabs, 141
Modelling heat transfer in hot rolling work rolls, 52
Hot-forging process
A study on die wear model considering thermal softening (II): Application of the suggested wear model, 183

Identification
Improvement of stamping computations by means of the identification of the bulk behaviour of coatings: application to galvanized sheets, 23
Infiltrated depth
Investigation on the kinetics of infiltration of liquid aluminium into an alumina fibrous preform, 227
Infiltration rate
Investigation on the kinetics of infiltration of liquid aluminium into an alumina fibrous preform, 227
Instability
Prediction of the formability of metastable low nickel austenitic stainless steel sheets, 201

John Allegro
Professor Henry Wright Baker: the Dead Sea Scrolls and his centenary, 66

Kerf charactristics
A machinability study of polymer matrix composites using abrasive waterjet cutting technology, 30

Laser nitriding
A semi-empirical model to predict the melt depth developed in overlapping laser tracks on a Ti–6Al–4V alloy, 116
Laser spot welding
A study on the joining strength of laser spot welding for automotive applications, 151
Liquid infiltration
Investigation on the kinetics of infiltration of liquid aluminium into an alumina fibrous preform, 227
Load
Finite-element analysis of the load of equal-cross-section lateral extrusion, 193
Longitudinal surface cracks
Behaviour of longitudinal surface cracks in the hot rolling of steel slabs, 141
Low nickel metastable stainless steel sheets
Prediction of the formability of metastable low nickel austenitic stainless steel sheets, 201

Machinability
A machinability study of polymer matrix composites using abrasive waterjet cutting technology, 30
Machining parameters
Fuzzy-logic based intelligent selection of machining parameters, 94
Mathematical modelling
Modelling heat transfer in hot rolling work rolls, 52
Mechanical behaviour
Influence of microstructure on the mechanical behaviour of welded 316 L SS joints, 36
Mechanical strength
Rupture failure and mechanical strength of the electrode wire used in wire EDM, 208
Melt depth
A semi-empirical model to predict the melt depth developed in overlapping laser tracks on a Ti–6Al–4V alloy, 116
Metal experiments
Finite-element modelling of cold forward extrusion, 85
Metal forming
A new concept for the description of surface friction phenomena, 189
Metal-matrix composite
Investigation on the kinetics of infiltration of liquid aluminium into an alumina fibrous preform, 227
Microhardness
Mechanical properties of hot worked Al–5CuO particle composite, 179
Microstructural properties
Microstructural effects in hot-explosively-consolidated W–Ti alloys, 247
Microstructure
Influence of microstructure on the mechanical behaviour of welded 316 L SS joints, 36
Microstructure and mechanical behaviour of a SiC particles reinforced Al–5Cu composite under dynamic loading, 175
Modelling
The stress–strain state of the contact in the simulation of cold welding processes, 3

New device
Experimental research on a new technology – ellipse spinning, 197
New technology
Experimental research on a new technology – ellipse spinning, 197
Numerical simulation
Numerical simulation and surface crack analysis of cup–rod combined extrusion, 261

Peripheral milling
Finite-element modeling of static surface errors in the peripheral milling of thin-walled workpieces, 235
Phase transformation
Early stages of phase transformation in quenched zinc–aluminum based alloys, 78
Piercing
Finite-element analysis and design in the combined precision forming of bending and coining with experimental measurement, 167
Plastic deformation
Calculation of temperature and determination of deformation resistance in H-beam rolling
(1) Temperature variation in a stand, 123
Principal curvatures
Profile determination of a tube-straightening roller by envelope theory, 157
Process design
Finite-element analysis and design in the combined precision forming of bending and coining with experimental measurement, 167
Processing-structure effects
Microstructural effects in hot-explosively-consolidated W–Ti alloys, 247
Progressive dies
Finite-element analysis and design in the combined precision forming of bending and coining with experimental measurement, 167

Remeshing method of contracting from the boundary to the interior
Research on a new remeshing method for the 3D FEM simulation of blade forging, 231
Remeshing
Research on a new remeshing method for the 3D FEM simulation of blade forging, 231
Residual stress
A finite-element analysis of residual stress in stretch grinding, 13
A study on the joining strength of laser spot welding for automotive applications, 151
Resistance spot welding
A study on the joining strength of laser spot welding for automotive applications, 151
Rolling process
Thermal stresses in work rolls during the rolling of metal strip, 45

Sheet metal forming
Improvement of stamping computations by means of the identification of the bulk behaviour of coatings: application to galvanized sheets, 23
Shielded metal arc
A comparative evaluation of gas tungsten and shielded metal arc welds of a "ferritic" stainless steel, 133
Shuttling temperature drop
Calculation of temperature and determination of deformation resistance in H-beam rolling
(2) Total change of temperature and deformation resistance, 128
Silicon carbide particle
Microstructure and mechanical behaviour of a SiC particles reinforced Al–5Cu composite under dynamic loading, 175
Spalling
Thermal stresses in work rolls during the rolling of metal strip, 45
Spinning
Experimental research on a new technology – ellipse spinning, 197
Spring back
Finite-element analysis and design in the combined precision forming of bending and coining with experimental measurement, 167
Steady-state
Finite-element modelling of cold forward extrusion, 85
Steel slabs
Behaviour of longitudinal surface cracks in the hot rolling of steel slabs, 141
Stretch grinding
A finite-element analysis of residual stress in stretch grinding, 13
Stretching force
Research on the section distortion of hat-section profiles in rotary draw bending with stretching force, 41
Substrate
Heat-treatment of zinc-coated aluminium, 112
Surface crack prediction
Numerical simulation and surface crack analysis of cup–rod combined extrusion, 261

Surface dimensional error
Finite-element modeling of static surface errors in the peripheral milling of thin-walled workpieces, 235

Temperature variation
Calculation of temperature and determination of deformation resistance in H-beam rolling
(1) Temperature variation in a stand, 123
Tensile strength
Mechanical properties of hot worked Al–5CuO particle composite, 179
Thermal stress
Thermal stresses in work rolls during the rolling of metal strip, 45
Thin-walled workpiece
Finite-element modeling of static surface errors in the peripheral milling of thin-walled workpieces, 235
Ti-6Al-4V alloy
A semi-empirical model to predict the melt depth developed in overlapping laser tracks on a Ti–6Al–4V alloy, 116
Tool life
A study on die wear model considering thermal softening (II): Application of the suggested wear model, 183
Total temperature change
Calculation of temperature and determination of deformation resistance in H-beam rolling
(2) Total change of temperature and deformation resistance, 128
Tube-straightening roller
Profile determination of a tube-straightening roller by envelope theory, 157

Velocity field
Study of the deformation velocity field and drawing force during the dieless drawing of tube, 73

W–Ti alloy
Microstructural effects in hot-explosively-consolidated W–Ti alloys, 247
Warm-forging process
A study on die wear model considering thermal softening (II): Application of the suggested wear model, 183
Wear model
A study on die wear model considering thermal softening (II): Application of the suggested wear model, 183
Welded joints
Influence of microstructure on the mechanical behaviour of welded 316 L SS joints, 36
Wire EDM
Rupture failure and mechanical strength of the electrode wire used in wire EDM, 208
Wire rupture
Rupture failure and mechanical strength of the electrode wire used in wire EDM, 208
Work roll
Thermal stresses in work rolls during the rolling of metal strip, 45
Modelling heat transfer in hot rolling work rolls, 52
Workpiece hardness
Effect of cutting edge geometry and workpiece hardness on surface generation in the finish hard turning of AISI 52100 steel, 216

X-ray diffraction
Early stages of phase transformation in quenched zinc–aluminum based alloys, 78

Zinc oxide
Heat-treatment of zinc-coated aluminium, 112
Zinc–aluminum based alloys
Early stages of phase transformation in quenched zinc–aluminum based alloys, 78
Zinc-coated aluminium
Heat-treatment of zinc-coated aluminium, 112
